# The First Look of Music Recommender System Web App

I am using Steamlit framework for web app. The opening page with drop down box bar for selecting movie names

Showing the 5000 song names in drop-down menu for selecting the required song on which system will generate recommendations

After clciking on **Show Recommendation** button,it will show the top 10 content based Recommended songs with poster of the song fetched from spotify api with name..

(In future i will add **collabrative Recommendation** based recommended songs also in the list)

In the end of the page a hovering Signature of mine..
